                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The RPCI-11 human BAC library was made from the blood of one male donor, as described by Oscegawa, K., Woon, P.Y., Zhao, B., Frengen, E., Tateno, M., Catanese, J.J. and de Jong, P.J. (1998) An improved approach for construction of bacterial artificial chromosome libraries. Genomics 51:1-8. The clone may be obtained either from Research Genetics, Inc. (http://www.resgen.com) or Pieter de Jong and coworkers at the Roswell Park Cancer Institute
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 VEIGHBORING SEQUENCE INFORMATION:
The clone sequenced to the left is RP11-110K9, 2000 bp overlap; the clone sequenced to the right is RP11-314A6. Actual start of this clone is at base position 161607 of RP11-110K9; actual end is at base position 144620 of RP11-546M8.
                                                                          Mapping information for this clone was provided by Dr. John D. McPherson, Department of Genetics, Washington University, St. Louis McPherson, Department of Genetics, about the map position of this sequence, see http://genome.wustl.edu/gsc
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       and
 University School of Medicine, 4444 Forest Park Parkway, St. Louis, MO 63108, USA
6 (bases 1 to 144620)
                                                                                                                                                                                                                                                                                                                 NOTICE: This sequence may not represent the entire insert of this clone. It may be shorter because we only sequence overlapping clone sections once, or longer because we provide a small overlap between neighboring data submissions.
                                                                                                                                                                                                                                                                                                                                                                                                        This sequence was finished as follows unless otherwise noted: all regions were double stranded, sequenced with an alternate chemistry, or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by sequence from more than one subclone; and the assembly was confirmed by
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Data from AC079612 was used to finish this clone, AC023787. Polymorphisms have been identified between AC079612, AC062017, AC023787.
                                                                                                                                                                                                          Web site: http://genome.wustl.edu/gsc

* NOTE: This is a working draft' sequence. It currently
* consists of 51 contigs. The true order of the pieces
* is not known and their order in this sequence record is
* arbitrary. Gaps between the contigs are represented as
* runs of N, but the exact sizes of the gaps are unknown.
* This record will be updated with the finished sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ö

Gaps

```
During sequence assembly data is compared from overlapping clones. Where differences are found these are annotated as variations together with a note of the overlapping clone mame. Note that the variation annotation may not be found in the sequence submission corresponding to the overlapping clone, as we submit sequences with conty a small overlap as described above.

This sequence was finished as follows unless otherwise noted: all regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by at least one plasmid subclone or more than one M13 subclone; and the assembly was confirmed by restriction digest, except on the rare occasion of the clone being a YAC.

The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases:

Em.; EMBL; Sw.; SWISSPROT; Tr.; TREMBL; Wp.; WORMPEP; Information on the WORMPEP database can be found at http://www.sanger.ac.uk/Projects/C elegans/wormpep This sequence was generated from part of bacterial clone contigs of human chromsome 1, constructed by the Sanger Centre Chromosome 1 Mapping Group. Purther information can be found at http://www.anger.ac.uk/HGP/Chr1

XXyac-13CF1 is from the ICT Human YAC library (RA) VECTOR: pYAC4.

Smal; Site_2: Smal; A mini-library was made by cloning
products derived from ORESTES PCR (U.S. Letters Patent
application No. 196,716 - Ludwig Institute for Cancer
Research) profiles into the pUC 18 vector. Reverse
transcription of tissue mRNA and cDNA amplification were
performed under low stringency conditions."

Reverse transcription of tissue mRNA and cDNA amplification were performed under low stringency conditions.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö
                                                                                                                    This is the nucleotide sequence of bimolecular ribozyme RzB fragment. This ribozyme cleaves substrate SP1.1 (see AAZ57641). The invention relates to a nucleic acid enzyme (e.g., deltaRzP1.1) that is constructed to have a substrate binding portion with the following sequence 3'-tUNXXNI-5'. The substrate of the enzyme has the sequence 5'-H'*GNNHNN-3'. The binding portion of the enzyme (ribozyme) base pairs to 6 nucleotides 3' to the cleavage site of the substrate (cleavage site is represented by '). At least one nucleotide is present 5' to the cleavage site of the substrate sequence. The enzyme of the invention is used to cleave a substrate nucleotide sequence at a specific cleavage site by mixing the substrate nucleotide sequence at a specific cleavage site by mixing the substrate nucleotide sequence at a specific cleavage site by mixing the substrate with the enzyme. The enzyme is used to cleave viral RNA or RNA causing for example an inherited disease. The enzymes also have other therapeutic, biotechnological and diagnostic applications
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Trans-acting antigenomic delta ribozyme, deltaRzP1.1 nucleotide sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  /*tag= c

                                                                                             This is the nucleotide sequence of ribozyme deltaRzP1.1. This ribozyme cleaves substrate SP1.1 (see AAS7641). The invention relates to a nucleic acid enzyme (e.g. deltaRzP1.1) that is constructed to have a substrate binding portion with the following sequence 3'-UNNXNN-5'. The substrate of the enzyme has the sequence 5'-H'*GNNHNN-3'. The binding portion of the substrate (cleavage site to 6 nucleotides 3' to the cleavage site of the substrate (cleavage site is represented by *). At least one nucleotide is present 5' to the cleavage site of the substrate nucleotide sequence at a specific cleavage site by mixing the substrate with the enzyme. The enzyme is used to cleave a substrate with the enzyme. The enzyme is used to cleave viral RNA causing for example an inherited disease. The enzymes also have other
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   a

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ö
                                                                                                                                                                      Tibozyme of the invention. This ribozyme cleaves substrate SP1.1 (see AAZ57641). The invention relates to a nucleic acid enzyme (e.g. table fall structured to have a substrate binding portion with the following sequence 3 -UNNXNN-5. The substrate binding portion with sequence 5 -H*6GNHNN-3. The binding portion of the enzyme has the sequence 5 -H*6GNHNN-3. The binding portion of the enzyme (ribozyme) base pairs to 6 nucleotides 3 to the cleavage site of the substrate (cleavage site is represented by *). At least one nucleotide is present 5 to the cleavage site of the substrate sequence. The enzyme of the invention is used to cleave a substrate nucleotide sequence at a specific cleavage site by mixing the substrate with the enzyme. The enzyme is used to cleave the substrate with the capame. The enzyme is used cleavage site by mixing the substrate with the argume. The enzyme is used colleavage site by mixing the substrate with an inherited disease. The enzymes also have other therapeutic, biotechnological and diagnostic applications. (Updated on 15-SEP-2003 to standardise OS field)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Trans-acting antigenomic delta ribozyme, deltaRzP1.2 nucleotide sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              /*tag= d

This is the nucleotide sequence of ribozyme deltaRzP1.2. This ribozyme cleaves substrate SP1.2 (see AAZ57634). The invention relates to a nucleic acid enzyme (e.g. deltaRzP1.2) that is constructed to have a substrate binding portion with the following sequence 3.-UNNXNN-5. The binding portion of the enzyme has the sequence 5.-H'*GNNNNNN-3. The binding portion of the enzyme (ribozyme) base pairs to 6 nucleotides 3' to the cleavage site of the substrate (Cleavage site of the substrate (Cleavage site of the substrate (cleavage site is represented by *). At leax one nucleotide is present 5' to the cleavage site of the substrate nucleotide sequence at a specific cleavage site by mixing the substrate with the enzyme. The enzyme is used to cleave by mixing the substrate with the enzyme. The enzyme is used to cleave viral RNA or RNA causing the reappear in inherited disease. The enzymes also have other the repentic, biotechnological and diagnostic applications. Note: This sequence is not shown in the specification, but has been derived from the

The present invention describes a library of polynucleotides comprising are: (1) an isolated polynucleotide (1) having at least 90% identity to one of the 1079 sequences (given in AAH30067 to AAH31145). Also described are: (1) an isolated polynucleotide (1) having at least 90% identity to one of the 1079 sequences; (2) a recombinant host cell containing (1); cone of the 1079 sequences (11); (5) a vector comprising (1); and (6) a method of detecting differentially expressed genes correlated with a cancerous of detecting differentially expressed genes correlated with a cancerous state of a mammalian cell comprising detecting a gene product encoded by 65 of the 1079 sequences given in the specification. The polynucleotides are used to monitor patients having (or susceptible) to cancer to detect potentially malignant events at a molecular level before they are of etectable at a gross morphological level. The polynucleotides are also useful for monitoring the efficacy of various therapies and preventive interventions. Polynucleotide probes based on the disclosed sequences are useful for chromosome mapping and detection of transcription levels. The 1079 polynucleotide sequences were derived from a human colon cancer cell line Km12L4-A cDNA library
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to cancer-associated proteins (CAP) and the cancer-associated (CA) nucleic acids encoding them. The invention also relates to a method for treating cancers involving administering to a patient an inhibitor of CAP, and a method of screening for anticancer activity in a potential drug involving providing a cell that expresses a CA gene, contacting a tissue sample derived from a cancer cell with an anticancer
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Human; cancer-associated protein; CAP; cancer-associated gene; CA; gene;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Novel human cancer associated protein encoded within open reading frame of cancer associated gene, useful as targets for diagnoming cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ..
0
an array to detect cancer or susceptibility to cancer
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     DB 3; Length 396;

           on expression of the CA gene. The CAP proteins are useful for detecting cancer associated with expression of a CAP protein in a test cell sample and for screening for a bioactive agent capable of modulating the activity of a CAP protein. The CA nucleic acids are useful for diagnosing cancer, involving determining the expression of a CA nucleic acid in a tissue. This sequence represents a human CA gene of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Cytostatic; immunosuppressive; nootropic; neuroprotective; antiviral; antiallergic; hepatotropic; antidiabetic; antiinflammatory; antiulcer; vulnerary; anticonvulsant; antibacterial; antifungal; antiparasitic; cardiant; gene therapy; cancer; immune disorder; cardiovascular disorder; neurological disease; infection; human; secreted protein;

(HUMA-) HUMAN GENOME SCI INC.

Ruben SM Barash SC, Rosen CA,

WPI; 2001-451937/48.

Isolated polypeptide for treating, preventing and/or prognosing disorders related to the musculoskeletal system including musculoskeletal cancers and also for testing and detection e.g. diagnosis.

Example 2; SEQ ID NO 2608; 781pp + Sequence Listing; English

The invention relates to novel genes (AAL34669-AAL37666) and proteins (ABB03087-ABB04109) associated with the musculoskeletal system useful for preventing, treating or ameliorating medical conditions e.g. by protein or gene therapy. The genes are isolated from a range of human tissues disclosed in the specification. The nucleic acids, proteins, antibodies and (ant) agonists are useful in the diagnosis, treatment and prevention of: (a) cancer, e.g. breast and ovarian cancer and other cancers of the adrenal gland, bone, bone marrow, breast, gastrointestinal tract, liver, lung, or urogenital; (b) immune disorders e.g. Addison's disease, allergies, autoimmune haemolytic anaemia, autoimmune thyroiditis, allergies, autoimmune haemolytic anaemia, autoimmune thyroiditis, calcadiovascular disorders such as arthritis and ulcerative collits; (c) cardiovascular disorders such as arthritis and ulcerative collits; (c) cardiovascular disorders such as wiral, cerebral anoxia and epilepsy; and (f) infections diseases such as viral, corpus and not form part of the printed specification, but was cobtained in electronic format directly from WIPO at ftp.wipo.int/pub/published\_pct\_sequences

The invention describes an isolated nucleic acid molecule comprising a sequence encoding musculoskeletal system associated polypeptides useful cor detecting disorders, e.g., cancer or cancer metastases, in animals or humans. The nucleic acid stimulates re-vascularisation of ischaemic tissues associated with conditions; treats wounds due to injuites, burns, post-operative tissue repair, and ulcers; stimulates angiogenesis and other cardiovascular conditions; treats wounds due to injuites, burns, post-operation; stimulates neuronal growth; can treat and prevent neuronal damage occurring in certain disorders or neurodegenesis and limb regeneration; stimulates conditions, such as, Alzheimer's disease, Parkinson's disease, and AIDS-conditions, such as, Alzheimer's disease, Parkinson's disease, and AIDS-conditions, such as frimulates chondrocyte growth, thus they can be used to chance bone and periodontal regeneration and aid in tissue transports or conditions at a prevents skin aging due to sunburn by stimulating crativate hair-forming cells and promotes melanocyte growth; stimulates cravate hair-forming cells and promotes melanocyte growth; stimulates cravate hair-forming cells and promotes melanocyte growth; stimulates cransplantation or for supporting cell culture of primary tissues; induces tissue of mesodermal origin to differentiate in early embryos; increases to mesodermal origin to differentiate in early embryos; increases the differentiation or proliferation of embryonic stem cells, besides, haematopoietic lineage; modulates mammalian community, early bight, weight, hair colour, eye colour, extransplantation as bedipose tissue, pigmentation, size, and shape (e.g., such as, body height, weight, hair colour, eye colour, extransplantation or physical state by infilmenting bothythes, caricadic ribyther and early or proliferation of embryosic commetic surgery); modulates mammalian metabolism; changes mammal's metal communication or physical state by infilmenting bothythes, early caricadic ribyther.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            depression, tendency for violence, tolerance for pain, reproductive capabilities, hormonal or endocrine levels, appetite, libido, memory, or stress, increases or decreases storage capabilities, far content, libid, protein, carbohydrate, vitamins, minerals, cofactors or other nutritional components. This sequence encodes a novel human musculoskeletal system aridgen. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from the US patent office at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Isolated nucleic acid molecules encoding musculoskeletal system associated polypeptides, useful for detecting disorders, e.g. cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Seguence 772 BP; 200 A; 179 C; 202 G; 191 T; 0 U; 0 Other;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ftp.seqdata.uspto.gov/sequence.html?DocID=20020147140
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Disclosure; SEQ ID NO 2608; 321pp; English.

Protein C DNA coding sequence and expression vector for prodn. - used for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            In the construction of the full length protein C gene this sequence the introns removed then is joined to a cDNA clone. The desired genomic:cDNA is then generated by looping out of unwanted sequences using oligomucleotide-directed deletion mutagenesis. The protein produced upon transformation of mammalian host cells, contg. the recombinant DNA, has substantially the same blological activity as natural protein C and is hence useful in the treatment of blood coaquiation disorders.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention relates to a novel isolated musculoskeletal system-associated nucleic acid molecule. The nucleic acid of the invention demonstrates cytostatic and osteopathic activities and may be useful for preparing a medicament for preventing, treating or ameliorating a medical condition such as cancer of the musculoskeletal tissues or osteoporosis, possibly via gene therapy or vaccine production. The current sequence is that of the human musculoskeletal system-associated genomic DNA of the invention. The current sequence is one shown within the specification per se but is available on the USPTO web-site
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New nucleic acid molecule, useful for preparing a medicament for preventing, treating or ameliorating a medical condition e.g., cancer of musculoskeletal tissues or osteoporosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps

```

```
A lambda gt cDNA library was prepared from human liver mRNA. The library was screened with iodine-125 labelled antibody to human protein C. A cDNA which lacked the coding sequence for the pre-pro peptide and the forst 23 amino acids of protein C was lablated and used as a hybridisation probe. The remainder of the coding sequence was obtained from a human genomic. PNA library in lambda Charon 4A. Recombinantly produced protein C can be used to treat thrombotic disorders such as venous thrombosis. (Updated on 25-MAR-2003 to correct PA field.)
                                                                                                                                                     Human protein C or activated protein C - prepd. using expression vector capable of integration in mammalian host cell DNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Human, tissue specific, diagnosis, brain, heart; skeletal muscle; lung, liver, uterus; ovary; stomach; intestine; kidmey; pancereas, ss; metabolic disease; developmental disease; cytostatic; immunomodulacry; neuroprotective; gene therapy; cancer; immunopathology; neuropathology.

sequences (I). (I) can have cytostatic, immunomodulatory and neuroprotective activities, and can be used in gene therapy. (I) and proteins (II) encoded by then are used in high throughput screening assays to select DNA molecules, RNA molecules, peptide nucleic acids, mimetics, immunogloulins, inhibitors, artagonists, antibodies or their fragments, immunogloulins, inhibitors, drug compounds and pharmaceutical agents. Expression of (I) in a sample indicates the differentiation of embryonic stem cells into a tissue selected from brain, heart, kidney, liver, lung, skeletal muscle or pancreatic tissues. (I) and (II) are used to produce an expression profile that defines a metabolic or developmental process, treatment, condition, disease or disorder. The gene profile can be used for diagnosis, prognosis or monitoring of treatments and for investigating a preclisposition to a disorder where the gene is associated with a cancer, immunopathology or neuropathology
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ö

```
A genomic DNA fragment (AAT32796) codes for human full-length protein C (AAM02600), a zymogen of a serine protease that plays an important role in blood clotting and in the generation of fibrinolytic activity in vivo. It was obtd. from a human genomic library in phage Charon 4A using a partial cDNA clone as probe. A complete cDNA clone (AAT32795) was also produced, Protein C-encoding nucleic acids can be used for large-scale prodn. of protein C, or variants modified to improve cleavage between the heavy and light chains of the circulating intermediate. (Updated on 25-MAR-2003 to correct PF field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    New DNA encoding modified forms of opt. activated protein C - and related transformed cells for prodn. of recombinant protein C for use e.g. as an

(AAMA25086). A claimed method for producing human protein C in the milk of a transgenic animal involves: (a) providing a DNA construct comprising DNA encoding a secretion asgnal and a protein C propeptide, operably linked to DNA encoding two chain cleavage site-modified protein C, the 2 DNA sequences being linked to elements required for protein C, the 2 DNA sequences being linked to elements required for protein C expression in a mammary gland of a host female animal, esp. the beta-lactoglobulin gene promoter (see AAT79725), and (b) using the DNA construct to breed a transgenic animal (esp. sheep, rabbit, cattle, goat) that produces protein C in its milk, at least 90% of the protein C being in the two-chain form. Modification of the protein C two-chain cleavage site (see chain form. Also claimed is a non-human mammalian embryo containing in its nucleus a heterologous DNA segment encoding cleavage
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Production of protein C in transgenic animal - useful for high quantity protein C production with therapeutic value.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    sequence comprises human genomic DNA encoding protein C
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Sequence 11725 BP; 2444 A; 3298 C; 3375 G; 2608 T; 0 U; 0 Other;

AAZ32159 to AAZ32194 represent reference alleles for specifically claimed nucleic acid sequences from the present invention which comprise polymorphic sites as given in a table in the specification, selected from 92 single nucleotide polymorphisms in which the nucleotide at the polymorphic site is different from a nucleotide at the same site in a reference allele. The nucleic acids, and primers and probes, are used to identify polymorphisms, which may predispose an individual to disease, especially a vascular disease. They can also be used in phenotype correlations, forensics, paternity testing, medicine or genetic analysis. AAY49550 to AAY49573 represent the proteins which correspond to some of

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ઠ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö
                                                                                                                                                 This is the nucleotide sequence of a trans-acting antigenomic delta hazbozyme of the invention. This ribozyme cleaves substrate SP1.1 (see AA55641). The invention relates to a nucleic acid enzyme (e.g. deltaZeP1.1) that is constructed to have a substrate binding portion with the following sequence 3'-UNNXNN-5'. The substrate of the enzyme has the sequence 5'-H'«GNNHNN-3'. The binding portion of the enzyme (ribozyme) base pairs to 6 nucleotides 3' to the cleavage site of the substrate of cleavage site is represented by *). At least one nucleotide is present 5' to the cleavage site of the substrate sequence. The enzyme of the invention is used to cleave a substrate nucleotide sequence at a specific cleavage site by mixing the substrate with the enzyme. The enzyme is used to cleave that RAA our RAA causing for example an inherited disease. The applications. (Updated on 15-SEP-2003 to standardise OS field)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Trans-acting antigenomic delta ribozyme, deltaRzP1.1 nucleotide sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       l. .6

                                                                                                                                This is the nucleotide sequence of ribozyme deltaRzP1.1. This ribozyme cleaves substrate SP1.1 (see AAZ57641). The invention relates to a nucleic acid enzyme (e.g. deltaRzP1.1) that is constructed to have a substrate binding portion with the following sequence 3'-UNNXNN'5'. The substrate of the enzyme has the sequence S'-H'*GNNHNN-3'. The binding portion of the enzyme (ribozyme) base pairs to 6 nucleotides 3' to the cleavage site of the substrate (cleavage site is represented by *). At least one nucleotide is present 5' to the cleavage site of the substrate sequence. The enzyme of the invention is used to cleave a substrate nucleotide sequence at a specific cleavage site by mixing the substrate with the enzyme. The enzyme is used to cleave viral RNA or RNA causing for example an inherited disease. The enzymes also have other therapeutic, biotechnological and diagnostic applications
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Trans-acting antigenomic delta ribozyme, deltaRzP1.2 nucleotide sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              20. .25

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ઠે
                                                                                                                              This is the nucleotide sequence of ribozyme deltaRzPl.2. This ribozyme cleaves substrate SPl.2 (see AAZ57634). The invention relates to a nucleic acid enzyme (e.g. deltaRzPl.2) that is constructed to have a substrate binding portion with the following sequence 3'-UNNXNN'5'. The substrate of the enzyme (ribozyme) base pairs to 6 nucleotides 3' to the cleavage site of the substrate (cleavage site is represented by *). At least one nucleotide is present 5' to the cleavage site of the substrate sequence. The enzyme of the invention is used to cleave a substrate nucleotide sequence at a specific cleavage site by mixing the substrate with the enzyme. The enzyme is used to cleave a substrate with the enzyme is used to cleave viral RNA or RNA causing for example an inherited disease. The enzymes also have other therapeutic, biotechnological and diagnostic applications. Note: This sequence is not shown in the specification, but has been derived from the clearage is not shown in the specification, but has been derived from the

This is the nucleotide sequence bimolecular ribozyme RzA fragment. This ribozyme cleaves substrate SP1.1 (see AAZ57641). The invention relates to an ucleic acid enzyme (e.g. delteRzPl.1) that is constructed to have a substrate binding portion with the following sequence 3'-UNXXNN-5'. The substrate of the enzyme has the sequence 5'-H'*GNNHNN-3'. The binding portion of the enzyme (ribozyme) base pairs to 6 nucleotides 3'-to the cleavage site of the substrate (cleavage site is represented by *). At least one nucleotide is present 5' to the cleavage site of the substrate sequence. The enzyme of the invention is used to cleave a substrate nucleotide sequence at a specific cleavage site by mixing the substrate with the enzyme. The enzyme is used to cleave viral RNA or RNA causing for example an inherited disease. The enzymes also have other therapeutic, biotechnological and diagnostic applications
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Expressed sequence tag; secreted protein; haematopoiesis regulator; itsue growth, activin; infilbin; tumour invasion suppressor; EST; human; chemotaxis; chemokinesis; haemostasis; gene therapy; thrombolysis; receptor; ligand; anti-inflammatory; tumour inhibitor; ds.

The present invention relates to the isolation of novel human molecules for disease detection and treatment (MDDT), and the polynucleotide sequences (mddt) encoding them. The MDDT polypeptides may be used to screen for molecules that bind to, or are bound by the encoded conjuppeptides, and to develop a transcript image of a tissue or cell type. Probes comprising at least 20 nucleotides of the mddt polynucleotide may be used to assess the toxicity of a test compound. The MDDT polypeptides and mddt polynucleotides are useful in the diagnosis, study, prevention and treatment of diseases associated with the expression of molecules for disease detection and treatment. Such disorders include cell proliferative disorders (e.g. asthma, Crohn's disease, or and autoimmune/inflammatory disorders (e.g. asthma, Crohn's disease, or multiple sclerosis). The mddt polynucleotides may also be used as molecule markers, in microarrays, and in sometic or germline gene contents.
                                                           polypeptides, useful in diagnosing, studying, preventing or treating diseases associated with MDDT expression, e.g. autoimmune or inflammatory

                                                                                                                                                                                                                        The present sequence represents an expressed sequence tag (EST), and is a polynucleotide of the invention. The polynucleotides of the invention are all secreted EST sequences isolated from a variety of human tissue sources. The EST sequences and proteins encoded by them are predicted to have useful biological activities which would make them suitable for treating, preventing or ameliorating medical conditions in humans and animals, although no supporting data is given. Suggested activities include nutritional activity, immune stimulating or suppressing activity, haematopoiesis regulating activity, tissue growth activity, haemostatic and thrombolytic activity, chemotextic/chemokinetic activity, activity, activity, activity, activity, activity, activity, activity activity, undur invasion suppressor activity, tumour inhibition activity. The EST sequences are also stated to be useful for gene therapy

cancer antigens have cytostatic activity and can be used in gene therapy and vaccine production. N and P may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate P expression. For example, N and P may be used to treat disorders associated with decreased expression by rectifying mutations or deletions in a patient's genome that affect the activity of P by expressing inactive proteins or to supplement the patients own production of P. Additionally. N may be used to produce the colon cancer-associated Ps, by inserting the nucleic acids into a host cell and culturing the cell to express the proteins. N and P can be used in the prevention, diagnosis and treatment of colorectal sequences used in the examplification of the present invention. N.B. Pages 666 to 682 and page 7053 of the sequence listing were missing at time of publication, meaning no sequences are present for SEQ ID NO:1027
   proteins are collectively known as colon cancer antigens. The colon

SCI INC (HUMA-) HUMAN GENOME

Rosen CA CE, Birse

WPI; 2002-122018/16. P-PSDB; ABB89882.

Novel 1405 isolated polypeptides, useful for diagnosis, treatment and prevention of neural, immune system, muscular, reproductive, gastrointestinal, pulmonary, cardiovascular, renal and proliferative disorders.

Claim 4; SEQ ID NO 853; 2081pp + Sequence Listing; English.

The invention relates to novel genes (ABL89449-ABL90853) and proteins (ABB89040-ABB90444) useful for preventing, treating or ameliorating medical conditions e.g. by protein or gene therapy. The genes are 1solated from a range of human tissues disclosed in the specification. The nucleic acids, proteins, antibodies and (ant) agonists are useful in

```
ö
the diagnosis, treatment and prevention of: (a) cancer, e.g. breast and ovarian cancer and other cancers of the adrenal gland, bone, bone marrow, breast, gastrointestinal tract, liver, lung, or urogenital; (b) immune disorders e.g. Addison's disease, allergies, autoimmune haemolytic anaemia, autoimmune thyroiditis, diabetes mellitus, Crohn's disease, multiple solerosis, rheumatoid arthritis and ulcerative colitis, (c) cardiovascular disorders such as myocardial ischaemias; (d) wound healing; (e) neurological diseases e.g. cerebral anoxia and epilepsy; and (f) infections Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from NIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ě,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Novel nucleic acids and polypeptides, useful for treating disorders such as central nervous system injuries.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Wang D;

Claim 1; SEQ ID NO 1038; 10078pp; English.

```
The invention relates to human nucleic acids (AAIS7798-AAI61369) and the encoded polypeptides (AAM38642-AAM42213) with nootropic, immunosuppressant and cytostatic activity. The polynucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral neuropathy and localised neuropathies and central nervous system diseases, such as
                                                                                                                                                                                                                                                                                                                  Activin/inhibin activity, chemotactic/chemokinetic activity, haemostatic and thrombolytic activity, cancer diagnosis and therapy, drug screening, assays for receptor activity, arthritis and inflammation, leukaemias and C.N.S disorders. Note: The sequence data for this patent did not form
                                                                                                                                                                                                                            Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activities such as: Immune system suppression,
                                                                                                                                                                                                                                                                                                                                                                                                                                                         part of the printed specification
